### DETAILED ACTION

1. Applicant's response filed 2/4/05 has been received and considered. Claims 1,2 have been canceled. Claims 3,4 have been added as new claims.

#### ***Claim Rejections - 35 USC § 103***

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

4. Claims 3,4 rejected under 35 U.S.C. 103(a) as being unpatentable over Schunk in view of Meynier and Drott et al. and page 1 of applicants specification (with regard to the description of the prior Schunk publication).

Regarding claim 2, Schunk discloses a tandem brake master cylinder, similar in structure to applicants, having a floating piston (not labeled, but to the left of spring 54) a separation valve 24,24, a pressure control valve unit 12 (as per applicant's) capable of

Art Unit: 3683

functioning as claimed. Although not labeled Schunk appears to show reservoir chambers as now claimed. See the chamber to the left of the piston in the area of numeral 54 and to the right of piston 34.

According to applicants specification at page 1 Schunk provides a showing of the stroke simulator operating as claimed with the separation valve.

Schunk does appear to show a design similar to applicants in the area of numerals 42,44 and as discussed in col. 3 lines 12-29. Schunk also discussed an alternative embodiment at the bottom of col. 3 over to the top of col. 4.

Drott et al. is relied upon to show a cap member with a central orifice in the general area of numeral 13. See figures 1 and 2.

The reference to Meynier is relied upon to teach it is known to adjust the idle stroke of the piston via an orifice communication between the reservoir and piston chambers. See columns 1 and 3.

One having ordinary skill in the art at the time of the invention would have found it obvious to have incorporated the teachings of Drott et al. and Meynier discussed above into the device of Schunk to offer a master cylinder brake apparatus with better or predefined pedal feel characteristics based on predetermined braking requirements. The stroke lengths of the respective rod and floating pistons could be achieved by and well known conventional means—such as selection of particular springs with different spring constants, piston valve opening characteristics, orifice dimensions which communicate chambers, etc.

***Response to Arguments***

5. Applicant's arguments with respect to claims 3,4 have been considered but are moot in view of the new ground(s) of rejection.

***Conclusion***

6. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the date of this final action.
